Professional Summary

Detail-oriented software engineer with 2+ years of experience in scalable application development, agile methodologies, and the complete software lifecycle. Skilled in performance optimization, secure system design, and passionate about innovation, problem-solving, and continuous learning.

Technical Skills

Programming Languages: Java, Python, TypeScript, JavaScript, SQL, Shell Scripting.

Technologies : HTML, CSS, Node.js, React.js, Express.js, RESTful APIs, MongoDB, NoSQL, Docker.

Technical Skills : Object-Oriented Programming, Data Structures and Algorithms, System Design(LLD), Design Patterns, Agile Methodologies, AI Integration, GCP, Git, Linux, Jira, CI/CD Pipelines, Unit & Integration Testing.

Professional Experience

Zebra Technologies Corporation, Bengaluru | *Software Engineer* Nov. 2023 – Present

- Architected and developed an enterprise-grade commit tracking system supporting 300+ developers using **microservices architecture**, implementing **RESTful API** webhooks with **JWT authentication** and **role-based access control (RBAC)**. Designed **MongoDB** schema with compound indexing and aggregation pipelines, achieving sub-200ms query response times for real-time analytics across 1,000+ daily commits.
- Engineered backend with **Node.js/Express.js** using **MVC architecture**, implementing middleware for request validation, error handling, rate limiting, and CORS policies. Utilized **async/await patterns** and connection pooling for optimal database performance.
- Built responsive **TypeScript/React.js** frontend with **Redux** for centralized state management, **React Router** for SPA navigation, and custom **React Hooks** for API integration. Implemented **WebSocket** connections for real-time commit notifications and developer activity dashboards with **Chart.js** visualizations and data filtering algorithms.
- Containerized full-stack application using **Docker** with multi-stage builds, orchestrated **CI/CD pipelines** with automated testing, code quality checks, and deployment workflows. Implemented **Redis** caching layer reducing API latency by 40%.
- Led kernel-level development for A16 device, integrating **Linux Kernel 6.12** drivers and optimizing Android framework performance across multiple Snapdragon chipsets (660, 6375, 6490). Reduced device boot time by 120 seconds through systematic performance profiling and algorithm optimization.
- Contributed modifications to **Google Gerrit** to enhance test execution compatibility across Android devices, ensuring **CTS/GTS compliance** and platform stability. Link

Projects

AI-Powered Android Log Debugging Platform | *Google ADK, OpenAI API, React, Node.js, Java, Docker*

- Built AI-powered debugging platform integrating **Google ADK agents** and **OpenAI API** to automate log analysis. Achieved 82-85% accuracy in crash categorization and reduced debugging time by 60%.
- Developed full-stack application with **React.js** frontend, **Node.js/Express.js** backend, and **Java** parsers. Implemented **WebSocket** for real-time updates and asynchronous processing for scalability.
- Deployed production-ready platform with comprehensive testing, error handling, and **Docker** containerization.

Distributed Task Scheduler | *Node.js, Java, Redis, BullMQ, Docker* | *Link*

- Engineered a distributed task scheduling system with **BullMQ** and **Redis** for job queuing. Implemented **RESTful APIs** with 95% task execution efficiency and priority-based scheduling algorithms.
- Integrated **JWT authentication** with **Role-Based Access Control (RBAC)** following security best practices. Containerized application using **Docker** for scalable cloud deployment.

Education

Basaveshwar Engineering College 2019 - 2023

Bachelor of Engineering in Information Science and Engineering *CGPA: 8.1*
